
Prospective allocation
POLYSYS 2041, $70/dt
acres A^P and biomass Q^P
by county × land × crop
rent-indexed offer O = m × local cash rent
Gate 2: affordability
offer O ≤ payable rent L
L = $70/dt revenue
− production cost
Compatible land
Census of Agriculture 2022
Crop and Pasture pools B
(suppression completed)
Contract capacity
K = B · κ
κ = acreage-weighted b
(T1 transmission)
Implementable share
λ = min(1, K / A^P)
per county × land pool
no reallocation
Mobilized biomass
M_Q = Σ λ Q^P / Σ Q^P
national, county,
unmet biomass
Landholder experiment
Michigan 2012, randomized
$50–300 rental offers
1,270 choices, 403 owners
Gate 1: willingness
participation p(O)
× acreage share s
= access b = p·s
